

Pro Safe Hand Sanitizer

Why hand Sanitizer

- Germs are everywhere! They can get onto hands and items we touch during daily activities and make us sick.
- Cleaning hands at key times with soap and water or hand sanitizer that contains at least 60% alcohol is one of the most important steps you can take to avoid getting sick and spreading **germs** to those around you.

ONE QUESTION

Q: How well do hand sanitizers really work?

Answer:
“ Plain old soap and water is the most effective way to wash your hands. But if it’s not accessible, hand sanitizers are a good alternative. Your best bet: sanitizers that contain at least 65% alcohol. ”
